ALCOHOL-RELATED BRAIN INJURY
A GUIDE FOR PROFESSIONALS
THE ALCOHOL FORUM’S VISION FOR ALCOHOL-RELATED BRAIN INJURY IS THAT THOSE WHO LIVE WITH THIS CONDITION BE PROVIDED WITH THE REHABILITATIVE RESOURCES AND SUPPORT TO REACH THEIR FULL POTENTIAL AND LIVE HAPPY, FULFILLING LIVES.
THE ALCOHOL FORUM’S VISION IS THAT THE STIGMA ATTACHED TO ALCOHOL-RELATED BRAIN INJURY IS CHALLENGED AND OVERCOME.
CONTRIBUTORS

The Alcohol Forum are grateful to the following people who gave their valuable time, support and expertise to the production and peer-reviewing of this guide:

**Sinead Tolan,**
Occupational Therapist, Our Lady’s Hospital, Manorhamilton.

**Dr Paul Stewart,**
General Practitioner, Dunfanaghy Health Clinic, Donegal.

**Dr Caroline McMonagle,**
General Practitioner, Lifford Health Centre, Donegal.

**Dr Mark Hogan,**
Senior Clinical Neuropsychologist, HSE West.

**Dr Hugh Gallagher**
MICGP, GP Coordinator, Addiction Services Dublin North City & County.

**Dr Seán Ó Domhnaill,**
Consultant Psychiatrist, Medical Director Cuan Mhuire.

**Dr Mary Butler,**
Registrar in Neuropsychiatry, Beaumont Hospital, Dublin.

**Sharon Patton,**
Dietician Manager, Department of Nutrition and Dietetics, Letterkenny General Hospital.

**Ann-Marie Morrissey,**
Occupational Therapist, Clare Mental Health Services.

**Fiona Mills,**
Occupational Therapist, Clare Mental Health Services.

**Cora McAleer,**
Acting Manager, HSE Alcohol and Drug Service, Letterkenny, Donegal.

**Emily Scanlan,**
Fundraising Manager, Alcohol Forum.

**Moira Mills,**
Advisor to the Alcohol Forum, Donegal.

The Alcohol Forum would like to extend their gratitude and appreciation to all professionals, services and families who have supported the development, implementation and continuation of the ARBI service in the Northwest. These have included:

**HSE Mental Health and Addiction Service,** Donegal.
**HSE Older Peoples Services,** Donegal.
**HSE Social Work Department,** Donegal.
**HSE Mental Health Services,** Donegal.
**HSE Psychology Service,** Donegal.
**HSE Community and Mental Health Occupational Therapy,** Donegal.
**HSE Physical and Sensory Disability Service,** Donegal.
**HSE Primary Care Services,** Donegal.
**Letterkenny General Hospital,** Donegal.
**Brentwood Private Nursing Home,** Donegal.
**North West Regional Drug and Alcohol Task Force.**
**Irish Wheelchair Association,** Donegal.
**White Oaks Addiction Treatment and Rehab Centre.**

ABOUT THE LEAD AUTHOR

Dr. McMonagle is the ARBI Rehabilitation Coordinator with the Alcohol Forum. She is a psychologist with a special interest in Alcohol-Related Brain Injury and has led the Alcohol Forums endeavours to respond to the needs of those affected by this condition.

CO- AUTHORS

**Dr Mark Hogan,**
Senior Clinical Neuropsychologist, HSE West.

**Ann-Marie Morrissey,**
Occupational Therapist, Clare Mental Health Services.

**Fiona Mills,**
Occupational Therapist, Clare Mental Health Services.

**Dr Caroline McMonagle,**
General Practitioner, Lifford Health Centre, Donegal.

**Sinead Tolan,**
Occupational Therapist, Our Lady’s Hospital, Manorhamilton.

**Dr Seán Ó Domhnaill,**
Consultant Psychiatrist, Medical Director Cuan Mhuire.

**Dr Mary Butler,**
Registrar in Neuropsychiatry in Beaumont Hospital.
THE ALCOHOL FORUM

WHO WE ARE

The Alcohol Forum is a small registered charity that works to prevent and reduce alcohol related harms in communities. Based in the North West of Ireland and influencing across the island of Ireland the Alcohol Forum operates in conjunction with the Health, Justice, Education, Community and Business sectors to change the culture of alcohol in Ireland.

We are the only alcohol charity in Ireland working at community level to reduce alcohol consumption levels through community action. We are instigators of action on alcohol for community, voluntary and statutory agencies working to tackle alcohol harms nationally.

OUR VISION FOR ALCOHOL-RELATED BRAIN INJURY

• A health service which recognises ARBI as a national health priority.
• That those who live with Alcohol-Related Brain Injury be provided with the rehabilitative resources and support to reach their full potential and live happy, fulfilling lives.
• That the stigma attached to Alcohol-Related Brain Injury be challenged and overcome.
• A world where Alcohol-Related Brain Injury can be prevented.

A MESSAGE FROM KIERAN DOHERTY, CEO OF THE ALCOHOL FORUM

Alcohol-Related Brain (ARBI) Injury is a hidden but growing problem across Irish communities. The lack of professional awareness surrounding the condition continues to prevent the early identification, treatment and rehabilitation of ARBI.

In our first report studying ARBI published in 2011, we highlighted the lack of specialised care pathways in Ireland to meet the needs of people affected. We believe that our Health Service will be failing some very vulnerable people unless we provide a commitment to bettering our ways of working across the spectrum of disorders which ARBI encompasses.

Our hope is that this guide will provide a comprehensive overview of the crucial roles that various disciplines can play in improving rehabilitative outcomes, and facilitates skill development amongst those professionals most likely to come into contact with ARBI. Ultimately we hope to improve the quality of life of those affected and ensure that they meet their fullest potential.
ALCOHOL-RELATED BRAIN INJURY
IRELAND’S FORGOTTEN CONDITION

The physical and behavioural consequences of heavy drinking and intoxication are, unfortunately, all too familiar to professionals working in the Irish health service today.

The impact of our societal drinking practices will be more than apparent to those treating the one-in-four emergency-department patients whose admissions can be directly attributed to alcohol consumption. With 88 deaths a month in Ireland now being directly related to the use of alcohol, the physical health and economic burden of this universal problem cannot be refuted.

Among the growing numbers of people presenting with alcohol-related injuries and physical health problems is a sub-group of people with a condition that remains largely undiagnosed and untreated. Up to 80% of people with a disorder known as Alcohol-Related Brain Injury (ARBI) are diagnostically missed by attending medical practitioners and allied professionals.

The low identification rates associated with this disorder serve to create a vicious cycle of repeated and increasingly extended hospital admissions, progressive deterioration, reducing prognosis and rising morbidity. Despite having one of the highest rates of alcohol-consumption in the world, Irish professionals remain largely uninformed of this serious condition. The implications of this, not only for the affected individual, but for our health service and Irish families and communities, are enormous.

For example, ARBI now accounts for 10% of the dementia population and for 12.5% of dementias in people under the age of 65. It is thought that ARBI could account for 21% of the homeless of population and up to 42% of the prison population. There is a significant burden on our acute services with individuals with alcohol-related cognitive impairment being significantly over represented in populations of in-patients who are hard-to-discharge. This is not to mention the Irish families who suffer through the emotional turmoil of watching a loved one deteriorate cognitively, psychologically, physically and functionally over a period of many years.

It is difficult not to question why a condition that was initially discovered over a century ago, and currently affects an estimated 18,200 - 128,000 Irish people, is still not comprehensively provided for within the Irish health service. The lack of professional awareness surrounding ARBI means that there is a growing group of Irish people who are silently perishing away in the context of scant professional expertise, limited resources and stigmatisation.

Regrettably, ARBI is often viewed as “somebody else’s problem” and a culture of professional nilism in relation to the disorder is sometimes apparent. A growing body of literature and international interest conclusively indicates that positive outcomes can be achieved for these clients. When appropriate service responses are offered (or developed in accordance with client needs), acute hospital bed-day usage can be reduced by 85% and 75% of affected people can be supported successfully in community settings with only a 10% relapse rate.

Over over-arching aim of this guide is to improve the overall quality of care individuals with ARBI receive during their contact with services. By encouraging a chain of intra and inter-professional dialogue around ARBI we hope to cultivate a multi-disciplinary cross-tier approach to the identification, assessment, treatment and rehabilitation of this disorder.

Many professionals may not recognise that they have a whole host of skills applicable to the rehabilitative process of this disorder. For example, professionals across addiction, psychology, mental health, general practice, nursing and acquired brain injury are all equipped with skills and knowledge that are fundamental in informing an integrated service response and achieving successful outcomes for people affected by ARBI. It is more a question of how core professional skills can be adapted to meet the needs of this population, and how willing we might be to extend our services to people who do not typically “fit” within our remits.

Being attuned and responsive to the individual needs of people with ARBI (and of those who care for them) will be key in preventing the progressive deterioration usually observed when the condition is overlooked or missed. By providing clear guidance on how to respond to ARBI we hope that you will see more clearly your professional role within their rehabilitation. While not a definitive guide, we hope that there will be enough information for you to begin adapting your practices to meet the very unique needs of this client group.

### Screening for Malnourishment

- Identifying Malnourishment: 33
- Possible signs of Malnourishment: 34
- Assessment for Malnourishment - when to refer to a specialist: 34
- Helpful Tools for Identifying Malnourishment: 34
- Oral Health: 35
- Identifying Oral Health problems in Alcohol Users: 35
- What to do if you suspect Malnourishment: 36

### Section Four – Rehabilitation

- A Whole System Approach for ARBI: 38
  - Primary Prevention: 39
  - Secondary Prevention: 39
  - Tertiary Prevention and Treatment: 39
  - Management and Rehabilitation: 40
- Stages of Rehabilitation – A model from Cheshire and Wirral Partnership NHS: 41

### Section Five – Professional Considerations

- G.P Management of ARBI: 44
  - Diagnostic Criteria: 45
  - Contraindications or Complicating Factors: 45
  - Common Presentations: 45
  - Patient Assessment
    - General Appearance: 45
    - Physical Examinations: 45
    - Bloods: 46
    - Collaterals: 46
    - Cognitive Screening: 46
  - Management & Rehabilitation: 46
  - Prevention and Early Intervention: 47
  - Prognosis: 47
  - Family – The Hidden Patient: 47
- Acute Management and Treatment of ARBI: 48
  - Diagnostic Criteria: 48
  - Contraindication or Complicating Factors: 48
  - Wernicke's Encephalopathy
    - Caine Criteria: 49
    - Common Neuroimaging Findings: 49
    - Altered Mental Status/Mild Memory Impairment: 49
  - Eye Signs: 49
  - Gait Ataxia: 50
  - Malnutrition: 50
  - Medical Management: 50
  - Treatment: 50
  - Discharge Arrangements: 51
# Occupational Therapy in ARBI

- Considerations for Working with Individuals with ARBI
- Assessment
- Rehabilitation
  - Memory
  - Executive Dysfunction
  - Physical Rehabilitation
  - Mood
  - Self-Identity, Roles and Routines
  - Vocational Rehabilitation
  - Assistive Technology
  - The Importance of the Environment
  - Collaborative Working

# Neuropsychological Correlates of ARBI

- Diagnosis and Classification
- Time Course of Disorder
- Presentations: Chronic Conditions
- Expectations following Abstinence
- Timing of Assessment
- Facilitating Abstinence
- Environmental Factors
- Neuropsychological Assessment Process
  - Medical Notes
  - Collateral & Clinical Interviews
  - Behavioural Observation
  - Factors Influencing Formal Assessments
- Formal Neuropsychological Tests
  - Premorbid Functioning
  - Intelligence
  - Memory
  - Executive Functions
  - Motor Skills
- Complicating Factors

# Counselling for Alcohol-Related Brain Injury

- Identifying Cognitive Impairment in Therapy
- Do people with ARBI need Counselling
- Adapting Counselling for people with ARBI
- Moderate to Severe: Life Story Books
- Mild to Moderate: Adapted Cognitive Behavioural Therapy
  - Preparation
  - Developing Therapeutic Relationship
  - Behavioural Techniques
  - Simplify Cognitive Techniques
  - Compensate for Cognitive Impairment
- Dealing with Denial
Substance Misuse Residential Treatment Programmes 70
Alcoholics Anonymous 70
Training for Counsellors and Therapists 70

**Section Six – Adapting Environments and Interactions to meet the needs of ARBI** 71
- Problems of Attention and Concentration 72
- Problems with Speed of Information Processing 73
- Problems with Insight or Self Awareness 73
- Problems with Visuospatial Ability 74
- Problems with Memory 75
- Problems with Self-Monitoring 76
- Problems with Perseveration 76
- Problems with Initiation 77
- Problems with Planning and Organisation 77
- Problem Solving Difficulties 78
- Disinhibited or Inappropriate Behaviour 78
- Ataxia 79
- Peripheral Neuropathy 79
